

**In the Specification:**

Please amend the paragraph beginning on page 13, line 7 as follows:

FIG. 10 also show the top three rows **31** of the main drawer **22** as being highlighted in green color. The highlighting of the top three rows **31** in FIG. 10 has the same significance as does the highlighting of the top two rows **31** **28** in FIG. 8 discussed *supra*.

Please amend the paragraph beginning on page 16, line 1 as follows:

FIG. 12 shows the top two rows **28** of the main drawer **22** as being highlighted in green, similar to what was shown *supra* for the top two rows **28** of the main drawer **22** in FIG. 8. The discussion *supra* relating to such highlighting of the top two rows **28** of the main drawer **22** in FIG. 8 applies likewise to the highlighting of the top two rows **28** of the main drawer **22** in FIG. 12. In FIG. 12, the top row **29** of the Search Alerts drawer **24** **34** is shown as being highlighted in orange, which is analogous to what was shown *supra* for the top two rows **28** of the main drawer **22** in FIG. 8. The discussion *supra* relating to such highlighting of the top two rows **28** of the main drawer **22** in FIG. 8 applies to the highlighting of the top row **29** of the Search drawer **24** in FIG. 12. Accordingly, highlighting of any row ( $R_{SEARCH}$ ) of the Search drawer **24** is done for a period of time  $\Delta T_{SEARCH}$  during which the  $R_{SEARCH}$  is initially viewable (i.e., initially viewable to a user or viewer).  $\Delta T_{SEARCH}$  may be a predetermined period of time, namely a period of time that is established prior to the data feed being fed into the main drawer **22**. After said period of time  $\Delta T_{SEARCH}$ , said highlighting is turned off the any row  $R_{SEARCH}$ . The period of time  $\Delta T_{SEARCH}$  can be of any desired magnitude (e.g., 10 seconds, 20 seconds, 1 minute, etc.). The magnitude of the period of time  $\Delta T_{SEARCH}$  should be big enough for a typical viewer to take notice.

of the highlighted row  $R_{\text{SEARCH}}$ . For example, a value of  $\Delta T_{\text{SEARCH}}$  that is less than one-tenth of a second is probably too short to be practical.
